

Using smartphones for crowdsourcing research

Prof. Vassilis Kostakos
School of Computing and Information Systems
University of Melbourne

13 July 2017
Talk given at the ACM Summer School on Crowdsourcing
Xi'an Jiaotong-Liverpool University, Suzhou, China

Some background

- Is the crowd's wisdom biased?
 - Analysis of Amazon, IMDB, BookCrossing
 - (SocialCom, 2009)
- Human-algorithm hybrid analysis (of Twitter)
 - CrisisTracker
 - Attacked (?) by Libyan government
 - Using to track the Syrian civil war
 - Adopted by IBM
 - (ICWSM, ECSCW, IBM)
- Situated crowdsourcing
 - Using public displays, tablets, mobile phones
 - (UbiComp, CSCW, CHI, UIST)
- Crowdsourcing decisions & policy
 - Arbitrary questions: racism, back pain, policy
 - (UbiComp, B-HCI, ACM TIT, Policy & Internet)

“LEGO” - context

Individuals: Record your own data

No programming skills are required. The mobile application allows you to enable or disable sensors and plugins. The data is saved locally on your mobile phone. Privacy is enforced by design, so AWARE does not log personal information, such as phone numbers or contacts information.

You can additionally install plugins that will further enhance the capabilities of your device, straight from the client.

Scientists: Run studies

Running a mobile related study has never been easier. Install AWARE on the participants phone, select the data you want to collect and that is it. If you use the AWARE dashboard, you can request your participants' data, check their participation and remotely trigger mobile ESM (Experience Sampling Method) questionnaires, anytime and anywhere from the convenience of your Internet browser. The framework does not record the data you need? Check our tutorials to learn how to create your own plugins, or just contact us to help you with your study! Our research group is always willing to collaborate.

Developers: Make your apps smarter

Nothing is more stressful than to interrupt a mobile phone user at the most unfortunate moments. AWARE provides application developers with user's context using AWARE's API. AWARE is available as an Android library. User's current context is shared at the operating system level, thus empowering richer context-aware applications for the end-users.

[Show QRcode](#)**Description:** Earthquake sensing using smartphone accelerometer. **Sensors:**

▼ Accelerometer

☐ Status accelerometer

True or false to activate or deactivate accelerometer sensor.

Frequency accelerometer:

Non-deterministic frequency in microseconds (dependent of the hardware sensor capabilities and resources), e.g., 200000 (normal), 60000 (UI), 20000 (game), 0 (fastest).

▶ Ambient Noise

▶ Android Wear

▶ Applications

▼ Barometer

☐ Status barometer

True or false to activate or deactivate sensor.

Frequency barometer:

Non-deterministic frequency in microseconds (dependent of the hardware sensor capabilities and resources). You can also use a SensorManager sensor delay constant.

▶ Battery

▶ Bluetooth

▶ Communication

▶ Device Usage

▼ ESM

☒ Status esm

True or false to activate or deactivate ESM sensor.

▶ Google Activity Recognition

▶ Gravity

▶ Gyroscope

▶ Installations

▶ Light

▶ Linear Accelerometer

▶ Locations

▶ Lux Meter

▶ Magnetometer

▶ MQTT

▶ Network

▶ NTPtime

▶ OpenWeather

▶ Processor

▶ Proximity

▶ Rotation

▼ Screen

☐ Status screen

True or false to activate or deactivate sensor.

Role of UbiComp/HCI Scientists?

- We need scientists who can build market-ready technology
 - Our software is deployed into the hands of patients/users/consumers
- Who have experience with human-subjects studies
 - Our software is used on a daily basis, in-situ
- Who can “speak” the language of other disciplines
 - Large multidisciplinary teams
- Who can understand the nuances of interaction
 - Separate “noise” from “valuable” data
