Wet your hands with water

Completeness: 50%

Description

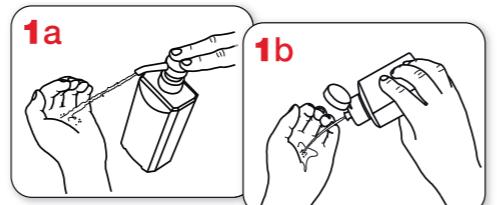

This is the first step from the standard hand washing process from WHO; however, it seems like you may need to prolong the duration of hand washing.

Standard Procedure

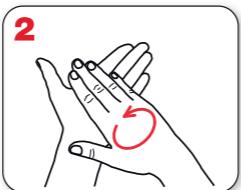

How to handrub?

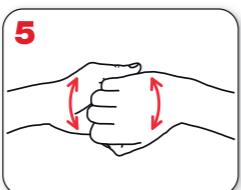

WITH ALCOHOL-BASED FORMULATION

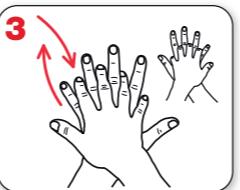

Apply a palmful of the product in a cupped hand and cover all surfaces.

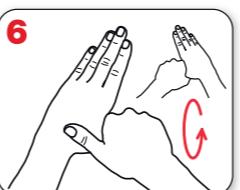

Rub hands palm to palm

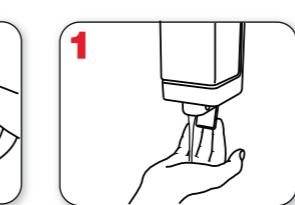

backs of fingers to opposing palms with fingers interlocked

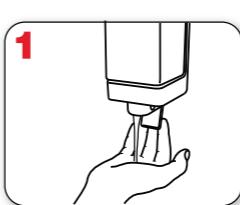

right palm over left dorsum with interlaced fingers and vice versa

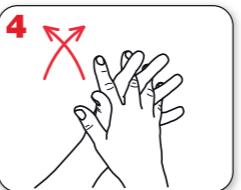

rotational rubbing of left thumb clasped in right palm and vice versa

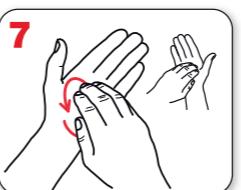

Wet hands with water

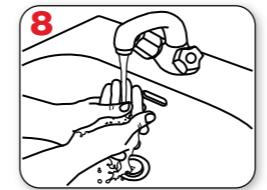

apply enough soap to cover all hand surfaces.

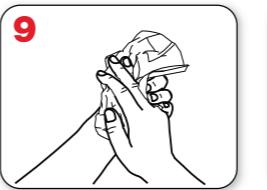

palm to palm with fingers interlaced

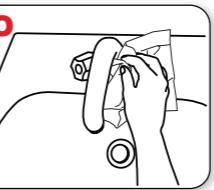

rotational rubbing, backwards and forwards with clasped fingers of right hand in left palm and vice versa

rinse hands with water

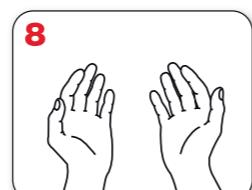

dry thoroughly with a single use towel

use towel to turn off faucet

20-30 sec

...once dry, your hands are safe.

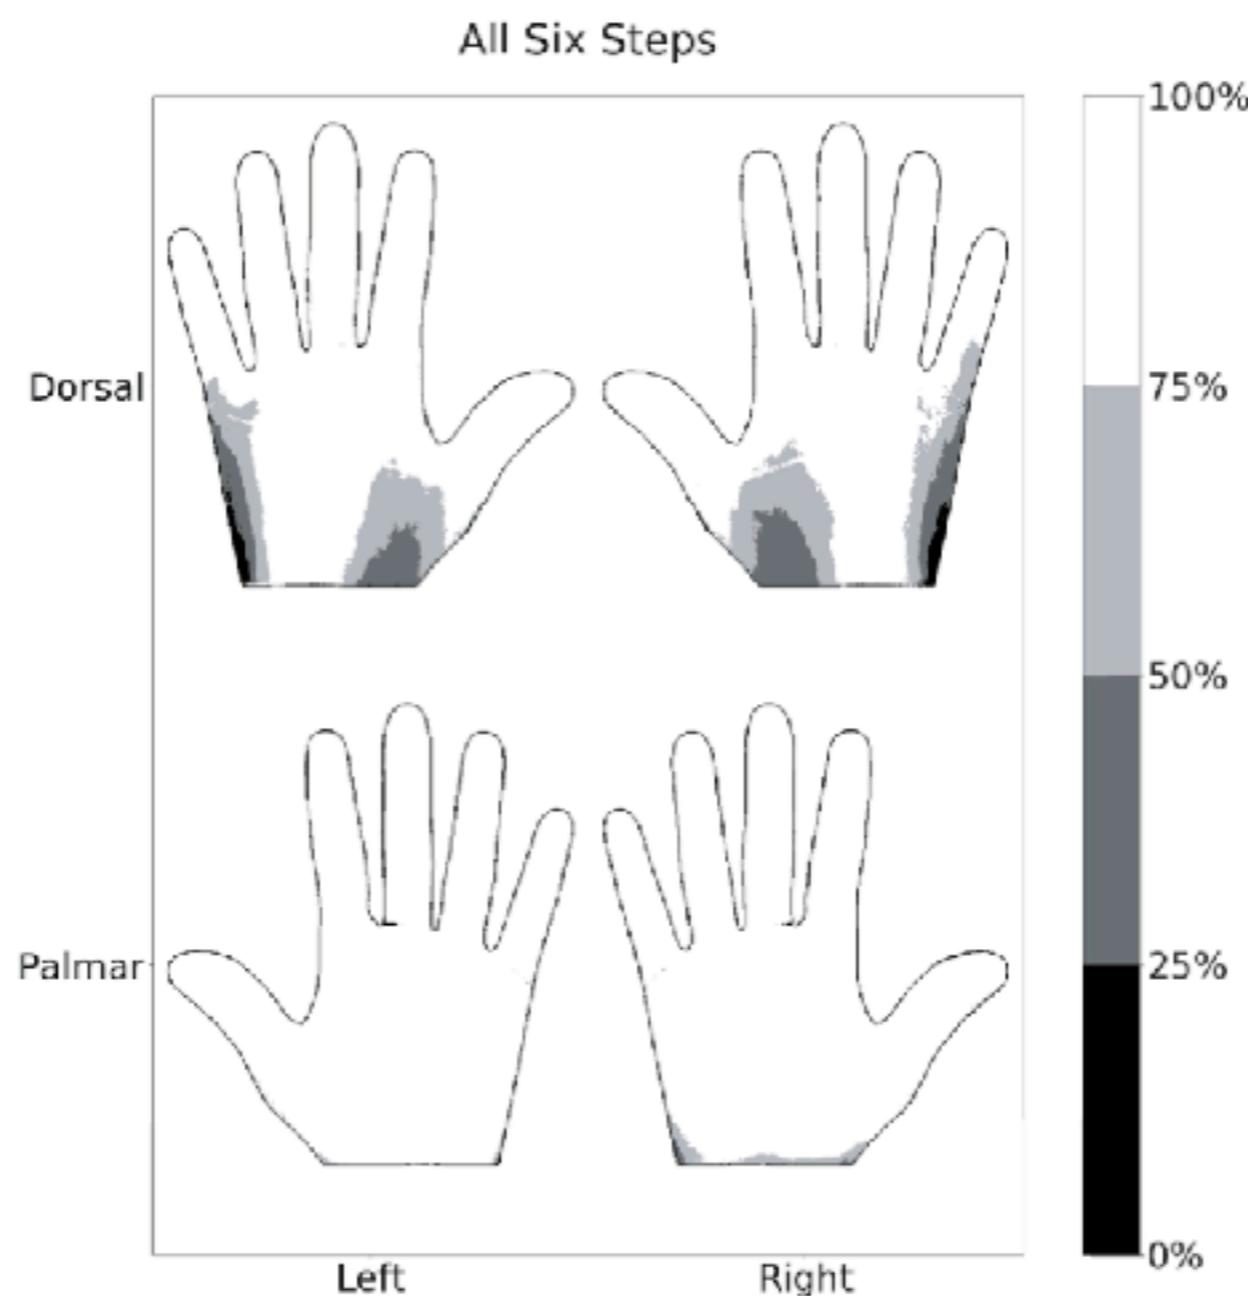

40-60 sec

...and your hands are safe.

Design: mondoragliis network

(a) Average sentiment.

Here are the sentiments of text that a university student has viewed on their smartphone for each day over a week. The sentiments range from -1 to 1, with -1 being most Negative and 1 being most Positive.

Your task is to rate how the student felt for each of the following feelings based on the sentiments of the text they have viewed:

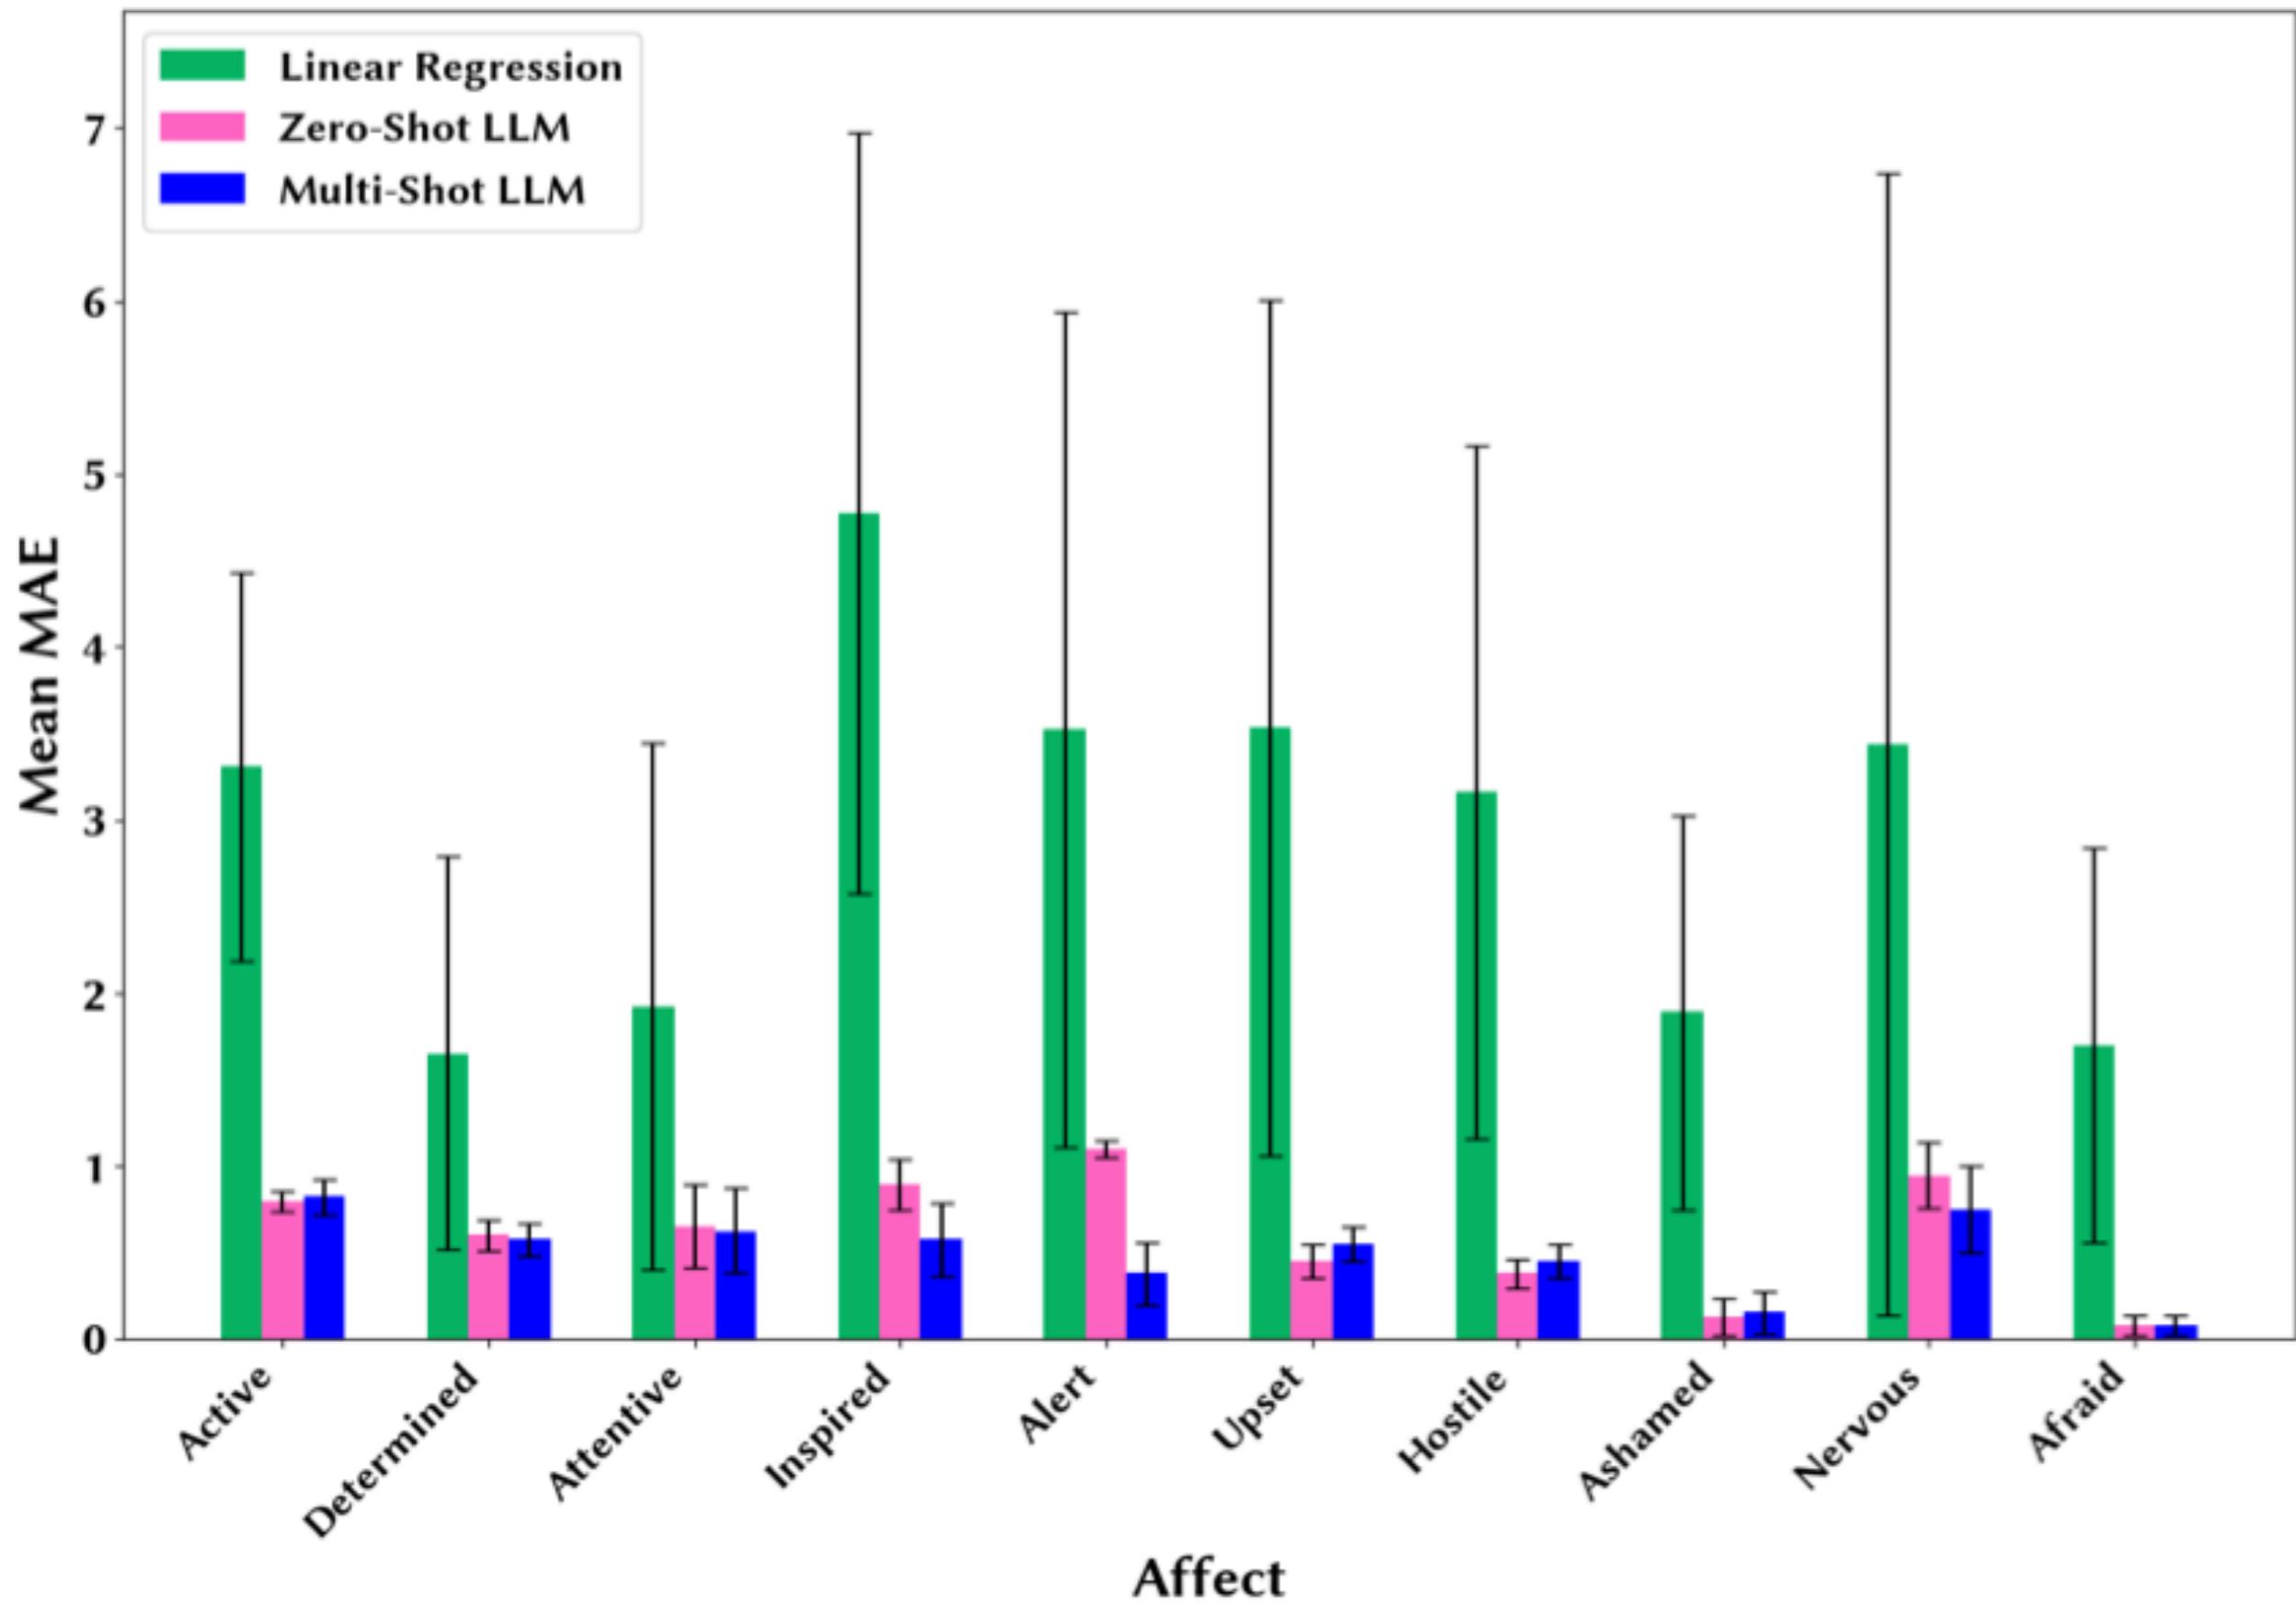

Active
Determined
Attentive
Inspired
Alert
Upset
Hostile
Ashamed
Nervous
Afraid

For each feeling, choose a Likert score ranging from 1 to 5 that best represents how the student generally felt during the week, where 1 represents Never and 5 represents Always.

Sentiments of text the student has viewed on their smartphone over a week:

Day 1: {sentiment of text viewed on the first day of the week}
Day 2: {sentiment of text viewed on the second day of the week}
Day 3: {sentiment of text viewed on the third day of the week}
Day 4: {sentiment of text viewed on the fourth day of the week}
Day 5: {sentiment of text viewed on the fifth day of the week}
Day 6: {sentiment of text viewed on the sixth day of the week}
Day 7: {sentiment of text viewed on the seventh day of the week}

When predicting information for a single week, only consider data from that

Set Sep 16 20:21:21 | applications | Opened the app Edge panels
 Set Sep 16 20:21:24 | battery | The phone started discharging, the battery level was 100

§3.2

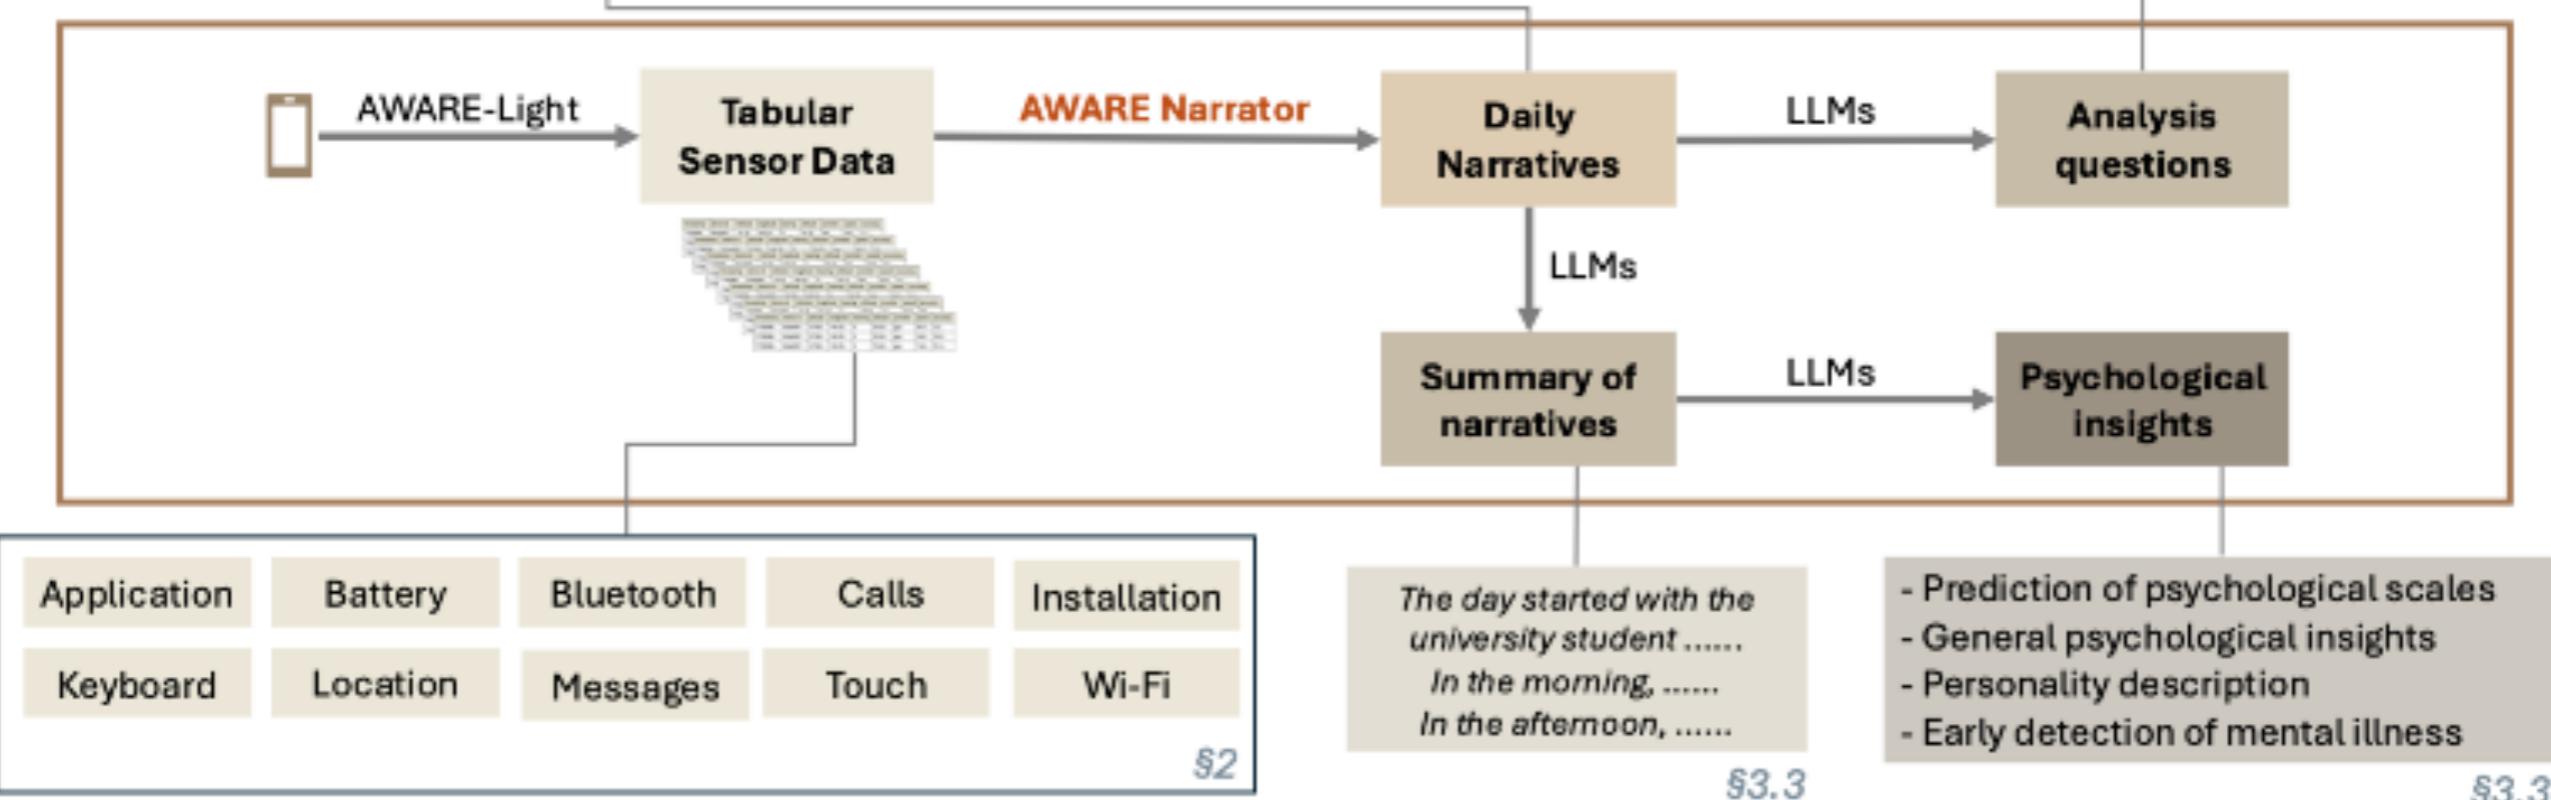

Fig. 1. AWARE Narrator workflow.

Large Language Models: empowering the study of human behaviour

- **Labelling**
 - Transcripts, data
- **Observations**
 - Can describe what's happening in a photograph
 - Can describe what's happening on a user's phone
- **Personalisation**
 - Personalise interventions
 - Personalise messages
 - Identifying suitable moment to deliver intervention

Concluding thoughts on what the future holds

- Everyone is obsessed with AI
 - “Give me your data and I will give you gold”
 - Most likely to work well in only some scenarios
 - Robots will not take over the world
- New tech > AI
 - AI needs data, so how do we get better data?
 - How can hospitals generate better data?
 - How to help people/experts generate better data?
- In the future, there will likely be 2 kinds of jobs:
 - Those who tell a computer what to do
 - Those who are told by a computer what to do
 - In both cases, tech needs to be designed for/with humans

The ~~end~~ *beginning!*
